

Maxi Space Covid Safe 6 Bay Building

Client:

Site location:

Allington WTW

Contract Value:

£40-50k

Brief:

Our client needed to provide a Covid Secure workspace for essential upgrade works at a water treatment site in Allington, Nottinghamshire. They wanted to create a one-way system building that allows staff to flow through the building with minimal contact so that they can practice social distancing with ease.

The Building:

With the build flexibility the Maxi Space range offers, we were able to create a first-class solution that delivered a Covid Safe building. Using the unique panelling system, we were able to add and remove panels with ease to produce a cost effective, one way system floor plan.

The building boasts a large open plan canteen area which allows site staff to enjoy lunch breaks whilst being socially distanced. The first-floor layout offers a large open plan office space with plenty of room to set up workstations to comply with safe working practices.

A separate standalone, 2bay drying room was also designed with human traffic flow in mind. Bench seating strategically positioned around the perimeter of the building and a one-way corridor works well.

Individual toilet cubicles for this building were specified by the client. Our single and double Maxi Space toilets provide single occupancy and give users total privacy. These units also help to ensure social distancing is adhered to.

The building was made from our standard hire fleet spec which boasts a standard internal ceiling height of 2.5m which offers a much more spacious feeling. Our hire fleet spec also has upgraded insulation which benefits from providing the building with superior U Values, making them more environmentally friendly and cost effective compared to standard units

Delivery & Installation:

Using our own fleet of Hiabs, we delivered the entire set up in one day including landing all the units on the pads and erecting the staircases. The installation took two working days and the building and site was handed over to the client on time and within budget.

Due to the time sensitive nature of our clients' work, delivering this project on time was critical. We used our tried and tested planning and delivery process to plan the job and a dedicated Maxi Space project manager ensured the project was delivered comfortably before the deadline.
